

Online System for Internet Reporting and Information Services

Osiris

Performance of Osiris

- Osiris integrates various Windows-applications with *printing capabilities* into one frontend which is displayed by *browser-technology*
- Fast provision of data and reports due to *automated processing*
- A completely thought-out concept for all your reporting

Characteristics

- Scalability* dependent on hardware only, no additional software customization
- Individual *configuration* with regard to layout and content
- OS-independence* at customers side due to platform comprehensive Java-programming
- Osiris facilitates a *client-based* document-management with *historical trailing*
- Easy *replacement of products*, even with different versions and manufacturers
- Worldwide distribution* via Internet and/or companywide access via Intranet
- Access to *various databases* and ODBC-datasources
- Security standards* being common at financial institutes are supported (data security, Firewall, SSL)
- Server-licence*; also without user-limitation

Benefits

- No product-training* required
- Server-product*, i.e. *centralised installation and administration* without customization at client-side
- Only an internet browser and Acrobat Reader is required at client-side
- Intelligent load-balancing on multiple machines (also workstations) possible

■ We would be pleased to perform a presentation for demonstrating the benefits of **Osiris**. ■
